25X1X 1. The Elektrovesa factory of Ljubljana is producing the following:

- a. High-frequency apparatus
- b. Electrolytes
- c. Telephone installations (high frequency)
- d. Loud speakers
- e. Condensers and other electrical apparatus

2. The factory is not able to carry on independent production since its activity is dependent upon importation of materials from abroad. Elektrovesa actually supplies the State railroads; the Jesenice iron industry; the Rade Koncar Factory in Zagreb; the Post Office Department; and the Yugoslav Military.

3. The Nikola Tesla factory in Belgrade specializes in the production of radio apparatus. Up to the present, only two models have been made, the "Kosmaj" and the "Tesla." The firm's production activity is dependent upon importation, since twenty-five percent of the elements used in radio manufacture must be purchased outside Yugoslavia. Electric bulbs for civilian use are also manufactured at the factory.

4. A new specialized factory at Bis will shortly begin manufacture of radio tubes.

This document is hereby designated to CONFIDENTIAL in accordance with the letter of 18 October 1973 from the Director of Central Intelligence to the Archivist of the United States.
